[www.osram.com](http://www.osram.com)

Printed on paper treated with  
chlorine-free bleach.  
Printed in Germany.

Subject to change without notice. Errors and omission excepted.

## General information

- The standard small tolerances apply to rated values and dimensions
- The lamps are warranted only if they are operated with approved control gear or with control gear declared to be suitable
- A list of sources of control gear and igniters is available on request. With the exception of the XBO® product family, all discharge lamps contain small quantities of materials which are harmful to the environment (such as mercury). In Europe, they therefore have to be disposed of under EEC Code 06 04 04\*, Waste containing mercury, or 20 01 21\*, Fluorescent tubes and other waste containing mercury. In other countries the relevant national regulations must be followed
- Specifications subject to change without notice, delivery subject to availability
- These special lamps should only be operated in casings that prevent exposure of the environment to UV light and the release of splinters

# See the world in a new light

For 100 years, the name of OSRAM has been synonymous throughout the world with excellence in lighting. OSRAM was registered and protected as a brand name in 1906. In 1919, three manufacturers – Siemens & Halske AG, Deutsche Gasglühlicht Anstalt (Auer-Gesellschaft) and AEG – combined their lamp production operations. This was the birth of the successful company that is now OSRAM GmbH. We are now one of the two leading lighting manufacturers in the world.

#### *OSRAM World:*

- 65 companies and sales offices for 100 countries
- 48 countries served by local agents or OSRAM GmbH, Munich
- 49 factories in 19 countries

### **Light is life.**

With its innovative technologies and solutions, OSRAM has continually opened up new horizons in artificial lighting – in offices, factories and homes, and on the roads. Light is an essential part of our everyday lives. A wide range of lamps and lighting systems from OSRAM provides the basis for living independent of natural daylight, with greater safety, better comfort, faster progress in science and technology and more economical use of valuable natural resources.

### **OSRAM is your partner.**

We supply customers in around 150 countries. Our sales logistics and highly developed order processing system ensure that OSRAM products are delivered at the right time to the right place throughout the world.

Because of rapid advances in lighting technology, it is essential to keep knowledge up to date and to keep expanding product ranges. We can help you here with new lighting systems, information on the latest developments and workshops in which we can improve your expertise as a lighting consultant.

### **The E-CHECK**

#### **label.**

The E-CHECK test label has become the seal of quality for the electrical installation sector. OSRAM has supported the E-CHECK initiative right from the start. This is because it offers real benefits for the electrical trade:

- It paves the way for high-quality customer contact.
- It enhances customer loyalty by showing competence.
- The label is an indication that the electrical installation has been completed properly.

**[www.voltimum.com](http://www.voltimum.com) –**

**the internet portal**

**for information**

**on electrical installation.**

OSRAM is one of the seven founding members of Voltimum, the first European internet portal of leading players in the electrical installation industry. It offers a professional online working environment for experts in this sector. It will expand the services we offer. Electricians will find a wide range of information, services and support at [www.voltimum.com](http://www.voltimum.com).

# Setting the pace in lighting engineering

*Photo: Spectra (Sweden)*

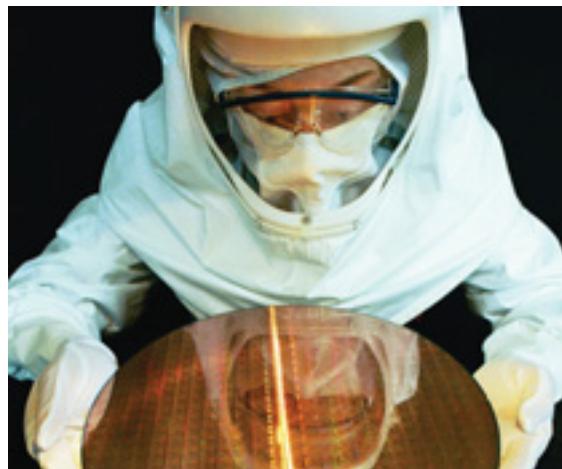

*Photo: Spectra (Sweden)*

Many events need impressive presentation in order to achieve their full effect. The brilliant large screens at pop concerts and professional multimedia presentations are excellent examples. For these pictures to impress the audience, OSRAM has developed extremely powerful and durable light sources.

In our **Display Systems** Business Unit we have combined all the lamps that are used for presenting images and data. These include innovative high-intensity discharge lamps developed specially for multimedia data and video projection and back-projection televisions, and high-tech lighting solutions for flat screens.

Competition in the entertainment sector is getting fiercer year by year. Success only comes to those who put on the best shows and reach the largest number of fans. Talent, creativity and energy have to be matched by perfect technical implementation. Lamps from OSRAM let stars appear in their best possible light right from the start.

Our **Entertainment** Business Unit supplies lamps and lighting systems for a wide range of applications in the entertainment industry. Our customers – producers, directors, stage designers, club owners, architects and so on – always know where they can find powerful and reliable light sources to turn their creative ideas into reality.

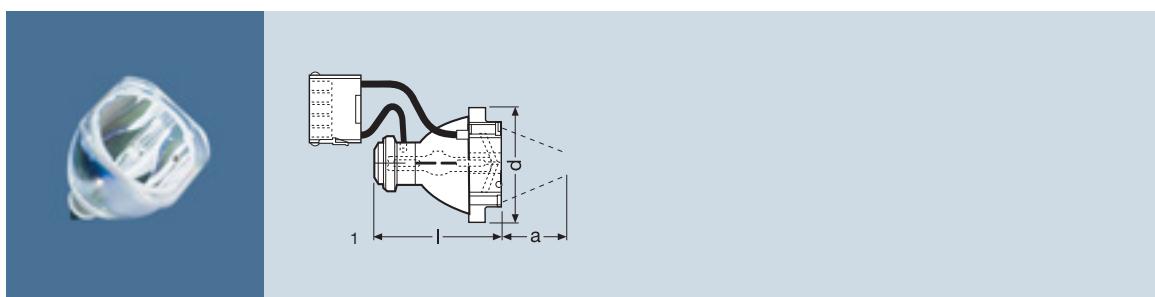

*Photo: Intel*

The cinema now performs a whole host of functions. It is a meeting place for people, young and old; it is a place where dreams and imagination come alive; it is where pictures and sound come together. And, lest we get carried away with the magic of the cinema, we should remember that it is an industry that turns over billions of dollars, pounds and euros each year. Yet all this would not be possible without a small but immensely important development – the artificial light source that enabled film to be projected onto a screen.

Our **Cinema** Business Unit offers customer in the cinema industry sophisticated and enormously powerful special lamps for film projection. Here, OSRAM is building on years of tradition. In close cooperation with the film industry and in a spirit of mutual trust we have continually improved these lamps in terms of their brightness, efficiency, durability and environmental impact. It all adds up to hours and hours of pleasure for film fanatics throughout the world.

However, innovations can only be achieved if the right tools are available. If the manufacture and testing of a product calls for extreme accuracy then optical processes are indispensable. Special lamps from OSRAM provide the perfect light for such processes.

Our **Semiconductors & Medical** Business Unit supplies lamps that illuminate small areas with high precision. This may involve ultra-violet (UV) radiation from HBO® lamps for microlithography or “artificial daylight” from XBO® lamps for endoscopy. To ensure the right results in each case, the lamps are matched to the relevant optical systems and applications to achieve optimum compatibility.

Product reference	Product number	W	V	A	lm	cd/cm <sup>2</sup>	
<b>VIP® halogen discharge lamps</b>							
VIP R 273/45	4008321039989	270	38	7.1	Refl.	17000	100000
Product reference		K <sup>1)</sup>	t [h]	I [mm]	d [mm]	a [mm]	No.
VIP R 273/45	5400	1.9	1000	73	67	45	1

VIP® lamps are halogen discharge lamps that meet the particular requirements of multimedia data and video projection thanks to their extremely short arcs and long life.

Their main characteristics and advantages are as follows:

- Short arc
- Very high luminance
- Long life
- High luminous efficacy
- Tailor-made colour spectrum
- Optimised reflector configuration
- ECG operation

VIP® lamps from OSRAM are used in light valve projectors (video projectors) based on LCD or DLP™ technology. Their spectral distribution has been adapted to the colour filter curves of the projectors and their service life optimised for maximum luminance and luminous efficacy. These benefits make them ideal light sources for professional projection applications, light guide systems and effect lighting.

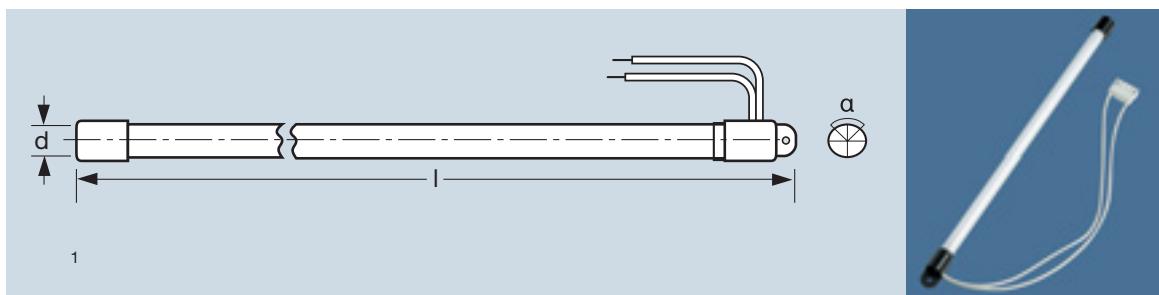

Standard VIP® lamps, on the other hand, are based on more conventional filling systems. With their longer arcs they offer a high degree of freedom for spectral matching. Information on special versions for OEMs is available on request.

Special versions for OEMs are supplied on request as P-generation OSRAM VIP® lamps. These P-VIP® lamps are high-pressure mercury lamps. Thanks to their specific filling parameters and very short electrode gaps, they achieve very high luminance values and very small spreads. Typical lamp parameters are luminance of over 200 kCd/cm<sup>2</sup> at 120 W and electrode gaps of 1.0 mm.

P-VIP® lamps are available with parabolic or elliptical reflectors with optimised contours for front and back projection based on LCD, LCOS or DLP™ light valve technology.

# Aperture lamp in tubular form, 10 mm tube diameter LINEX® linear excimer lamp, mercury-free

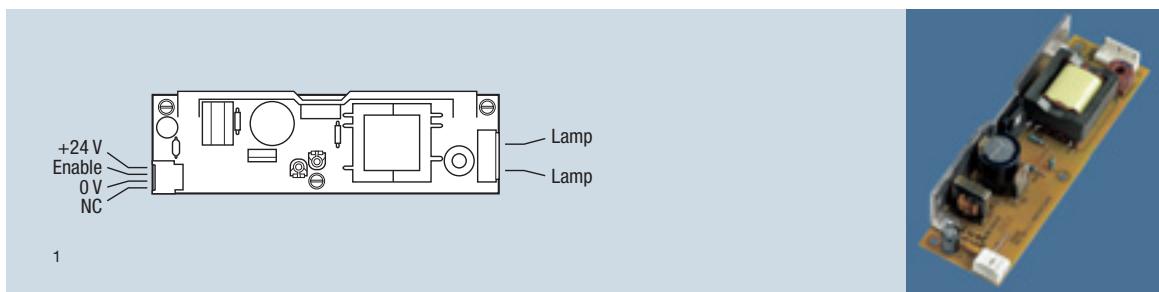

Product reference	Product number	W	Ra	Lx 8 mm	TUBE d [mm]	l [mm]	A°	Light No.	W SYSTEM
<b>LINEX® for ECG operation only</b>									
A2-10W35	4008321039989	35	Daylight	1 B	50000	10	510	80	1 40

A4-10W24	4050300652566	24	Daylight	1 B	60000	10	277	80	1 50

### How LINEX® works:

Xenon particles are excited by electrically restricted discharge and emit UV radiation. This radiation is efficiently converted into visible light by a special phosphor.

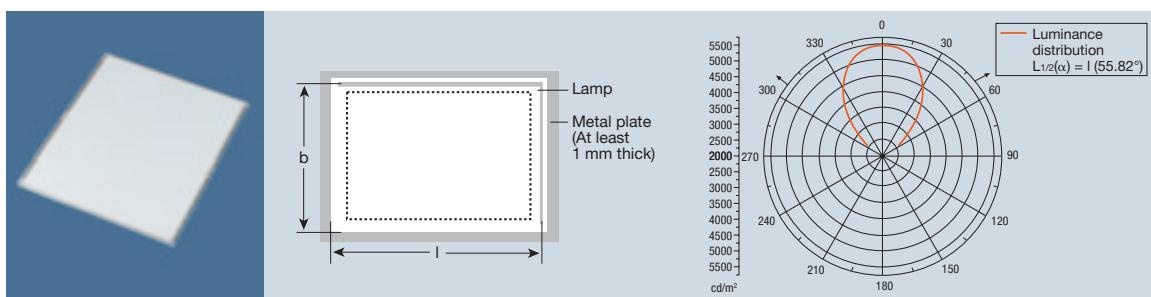

### Applications:

- Scanners, copiers, industrial image analysis, additional lighting

## OSRAM PLANON®:

### A completely new dimension

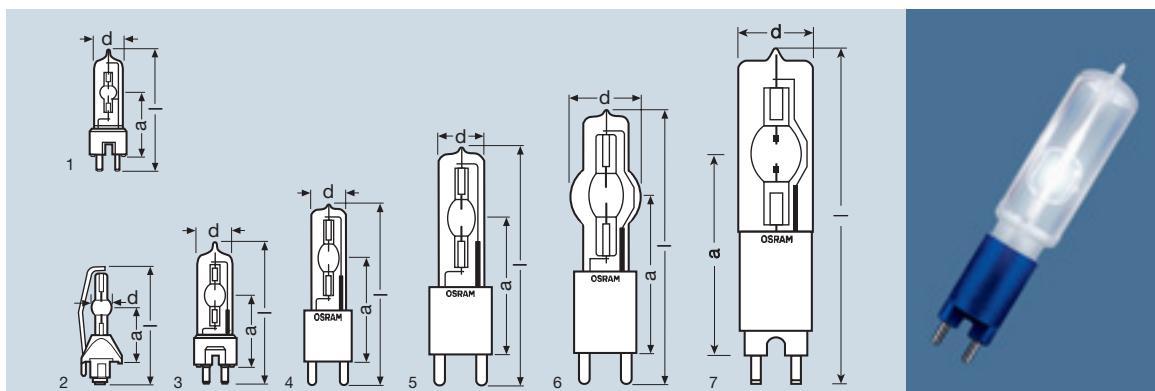

- Two-dimensional, mercury-free discharge lamp
- Lamp size (diagonal) from 10.4 to 21.3 inches
- Ultra low profile  $\leq 10$  mm
- Luminances from 3000 to 10,000 cd/m<sup>2</sup>
- Homogeneous brightness distribution over the entire surface
- Dimmable in the ratio of 1:5 (20% of rated output)
- Extremely long life of up to 100,000 h (MTTH = Mean Time to Half Brightness)
- Lamp life unaffected by switching cycle
- Lamp and control gear (ECG) available as a system

### Mercury-free technology:

- Luminous flux unaffected by temperature in the range from -30 °C to +85 °C
- Instant light (no warm-up time)
- Environmentally friendly product (waste disposal)

### Applications:

- Lighting for indoors and outdoors
- LCD backlighting
- Industrial image processing
- Architecture lighting and image information systems
- Lighting for film and photography

↗L = Square-wave ac current

~ = Sine wave ac current

W = Watts

SE = Single ended

XS = eXtreme Seal (max. permissible foil temperature 450 °C)

HMI® lamps are ac-operated discharge lamps in which the arc burns in a dense vapour atmosphere comprising mercury and the halides of rare earths.

Their main characteristics and advantages are as follows:

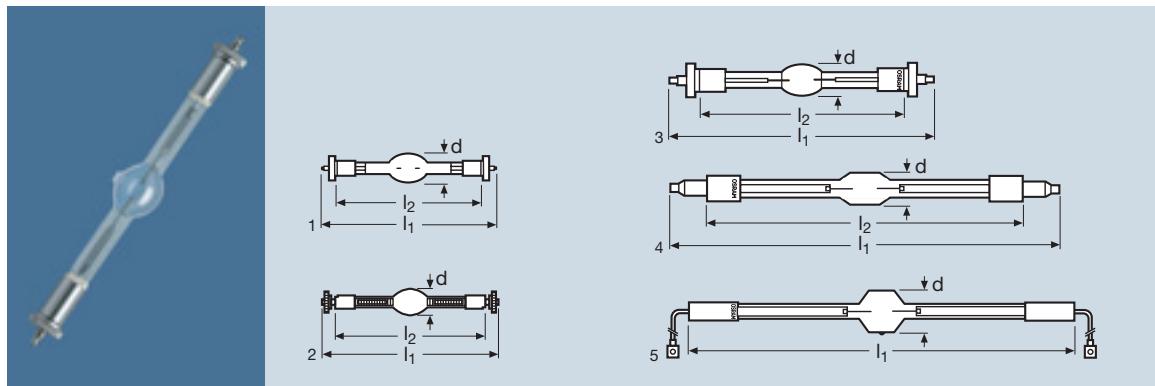

- Very high luminous efficacy of up to 100 lm/W
- Daylight colour temperature of approx. 6000 K
- High colour rendering index ( $R_a > 90$ )
- Hot restart capability
- Dimmable

#### Applications:

- Film and television recording under daylight conditions in the studio or outdoors
- Reporting (low-wattage lamps)
- Film and TV production (high-wattage lamps)
- Stage (lighting for dramatic effect)
- Professional photography
- Entertainment

### Safety:

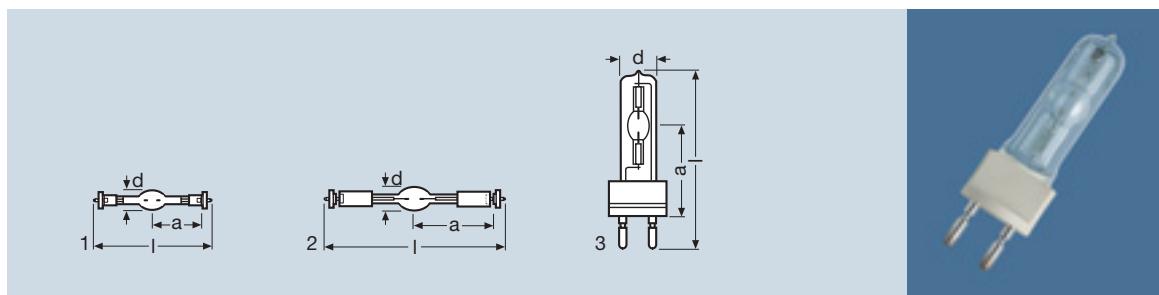

Because HMI® lamps emit UV radiation and operate at overpressure the following lamps must only be operated in appropriate fully enclosed luminaires. This also applies to the versions with outer bulbs. Suitable filters should be used to ensure that the UV radiation is reduced to an acceptable level.

### Literature:

Further information can be found in the following brochures, obtainable on request from OSRAM:

- “Technology and applications/Metal halide lamps”
- “Guidelines for control gear and igniters for metal halide lamps”
- “Availability of control gear and igniters”
- “Rome. 8 pm. Overcast. No problem. HMI lamps”
- “High Noon” HMI 12 and 18 kW/SE/GX51.

DE = Double ended

SE = Single ended

Thanks to their special filling and their electrode system, HMP® metal halide lamps can not only be dimmed, they can be “boosted”; in other words, they can be operated above their rated output. Whether the lamps are being dimmed or boosted, photometric characteristics such as colour temperature, colour rendering index and luminous efficacy remain virtually constant.

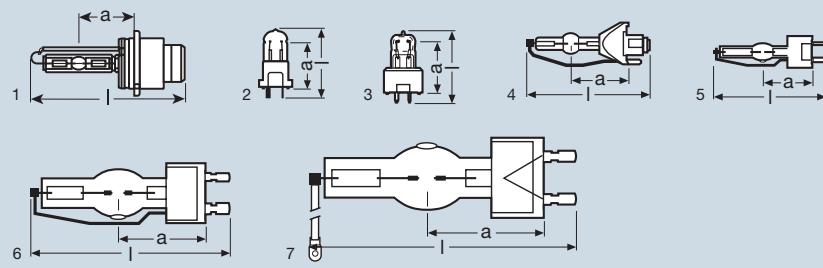

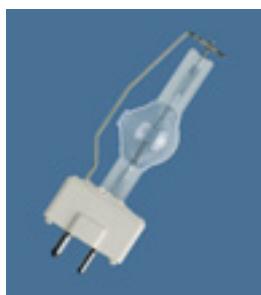

#### Major features:

- “Super Dim’n’Boost”
- Hot restart
- Long life at rated output
- Spectrum optimised for projection (daylight spectrum)

#### Applications:

- Overhead projection
- Video projection
- Multimedia projection

1) Exhaust point at the top  
2) Permitted from 300 to 600 W  
3) Permitted from 400 to 700 W

HTI® are metal halide lamps similar to HMI® lamps but use short-arc technology.

Their main characteristics and advantages are as follows:

- Short arc
- Daylight character
- Compact dimensions
- High luminance
- High luminous efficacy

**HTI®**  
**Metal halide lamps**

XS = eXtreme Seal (max. permissible foil temperature 450 °C)

## Baby SharXS® HTI® – the benefits at a glance:

- Standard wattages from 250 to 575 W
- One design, same lamp length, same LCL
- Pre-alignment base with slot
- Short-arc technology (5 mm)
- High average luminance (30 to 50 kcd/cm<sup>2</sup>)
- Daylight colour temperature (6000 K) and “bright light” character (7500, 8000 K)
- High colour rendering index (R<sub>a</sub> > 80 to > 85)
- Greater thermal load capacity thanks to XS technology (450 °C max. pinch temperature)
- Hot restart possible
- Average life 500 h – 3000 h (depending on type)
- AC current

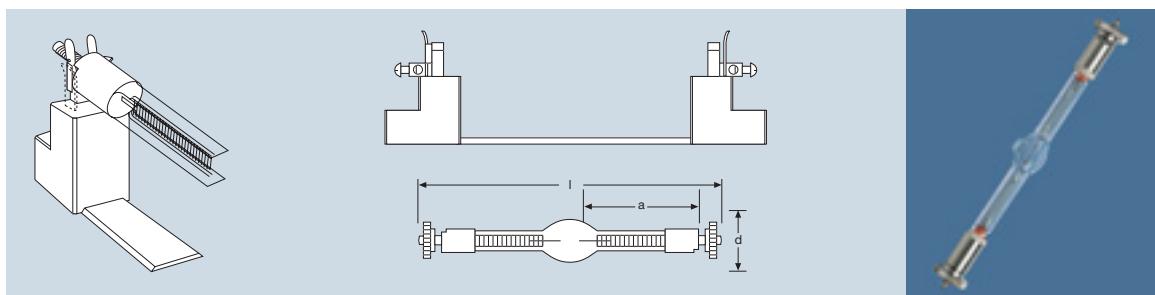

## Operation:

- forced cooling

□L = Square-wave ac current

HTI® reflector lamps have dichroic focusing reflectors and are highly efficient lighting systems.

They are used in endoscopy, boroscopy and light guide systems in the entertainment sector.

4ArXS HSD® lamps are long-life short-arc lamps intended primarily for applications in entertainment and architainment.

### Safety:

Because 4ArXS HSD® lamps emit UV radiation and operate at overpressure the following lamps must only be operated in appropriate fully enclosed luminaires. Suitable filters should be used to ensure that the UV radiation is reduced to an acceptable level.

### Literature:

Further information can be found in the following brochures, obtainable on request from OSRAM:

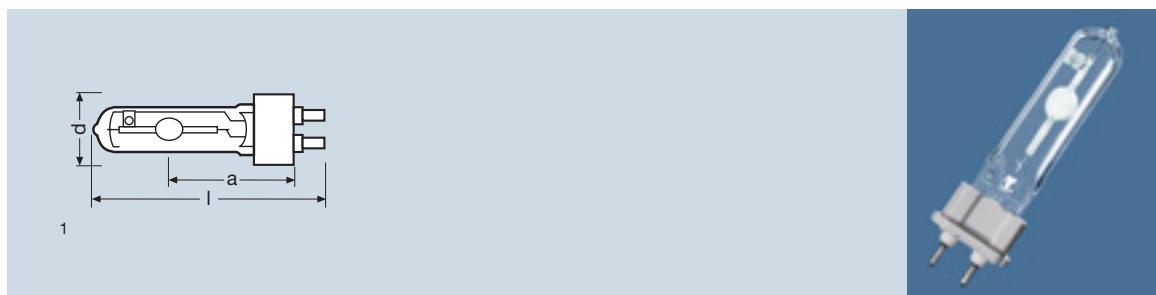

- "Technology and applications/Metal halide lamps"

- "Guidelines for control gear and igniters for metal halide lamps"
- "Availability of control gear and igniters"
- "4ArXS has it all" – Innovative metal halide lamps for creative architecture and effect lighting.
- CD-ROM 4ArXS HSD® and HCD®

Some lamp models are available as "XENOPHOT®" versions (HLX® types). With xenon instead of krypton as the filler gas, these lamps produce a luminous flux up to 10 per cent higher than lamps with identical electrical data.

From their designs, halogen mains voltage lamps can be categorised as single-ended and double-ended lamps. Depending on the application, they are designed to operate on 230 V, 240 V or 120 V.

The colour temperature of the lamps varies according to the application: 3400 K for maximum luminous efficacy, 3200 K for professional film and

TV work, 3000 K or 2900 K for applications where long life is important.

## Literature:

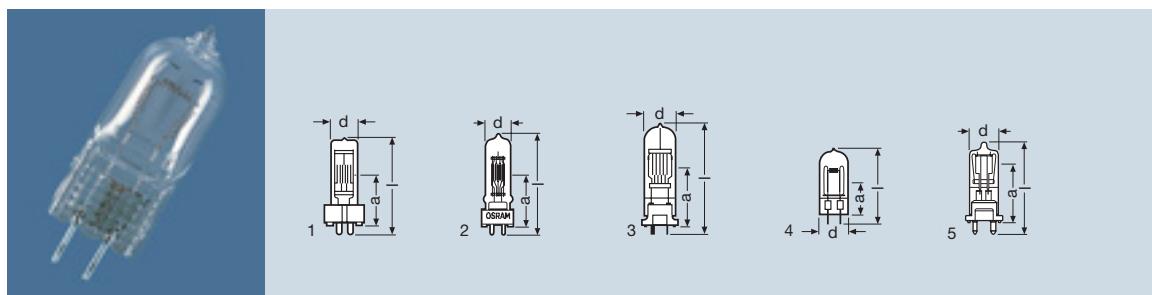

For further information on pinch technology, please refer to the following brochure:

- "Good vibrations!" New halogen lamps with quartz pinch technology. (122 W 100 DE)

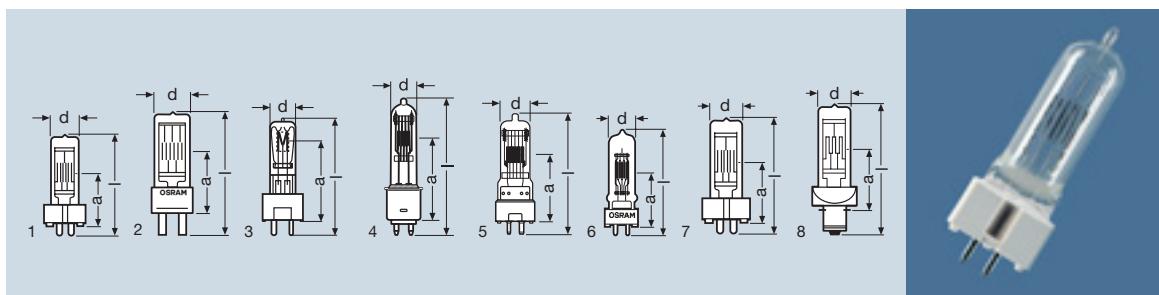

1) Available on request  
2) With quartz pinch technology  
3) With monoplane filament

 XS = eXtreme Seal (max. permissible foil temperature 450 °C)

High-performance HPL® halogen lamps are manufactured under licence from ENTERTEC Inc., L.A. The special arrangement of the filament segments is matched to the "Source Four" spotlight family of E.T.C. This arrangement makes optimum use of the generated light and achieves the same useful luminous flux for which 1000 W lamps had previously been required.

The QXL® halogen lamp with the special bayonet base can be changed without tools and without opening the spotlight. This special base, equipped with XS technology, permits a base temperature of 450 °C. This patented lamp for entertainment and architecture applications has been developed in cooperation with Electronic Theatre Controls (ETC).

OFR = Ozone-free version  
S = Short

W = Watts  
req. = required

XBO® are short arc lamps in which the discharge arc burns in an atmosphere of pure xenon gas at high pressure.

Their main characteristics and advantages are as follows:

- High luminance
- Daylight colour temperature of approx. 6000 K
- Continuous spectrum in the visible range
- High colour rendering index ( $R_a > 95$ )
- Constant light colour throughout the life of the lamp
- High arc stability
- DC operation
- Hot restart capability
- Instant light on starting

## Literature:

Further information can be found in the following brochures, obtainable on request from OSRAM:

- “Ready for your ideas!” Specialty lamps for innovative applications in medicine and industry

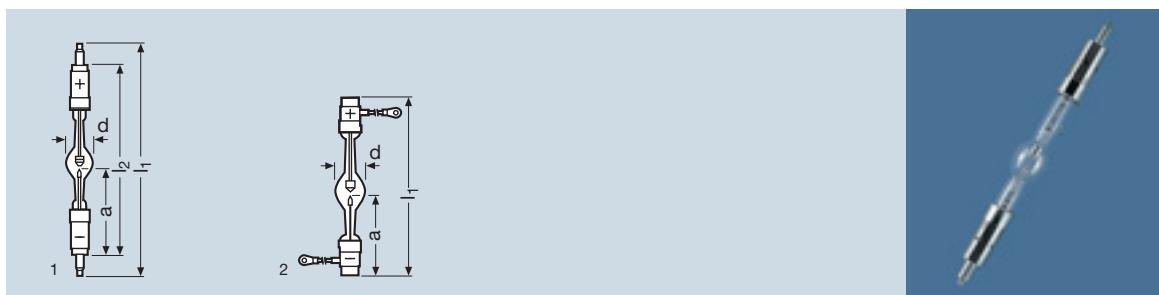

4) The focus lies 45 mm in front of the mounting rim on the lamp axis (working distance)

5) The focus lies 60 mm in front of the mounting rim on the lamp axis (working distance)

6) Also available in ozone-free version with the same data: XBO 75 W/2 OFR, XBO 150 W/1 OFR

7) Also available in Suprasil quartz version: XBO 150 W/4

OFR = Ozone-free version  
req. = required

XBO® lamps are double-ended short-arc discharge lamps in which the discharge arc burns between the two electrodes in an atmosphere of pure xenon gas.

Their main characteristics and advantages are as follows:

- Very high luminance (point light source)
- Daylight colour temperature of approx. 6000 K
- High colour rendering index ( $R_a > 95$ )
- Continual colour quality, irrespective of lamp type and lamp wattage
- Hot restart
- DC operation
- Dimmable
- Long life

**Applications:**

- Classic film projection
- Digital film and video projection
- Architecture lighting and effect lighting (“light finger”)
- Solar simulation

XBO® xenon short-arc lamps have a particularly high luminance.

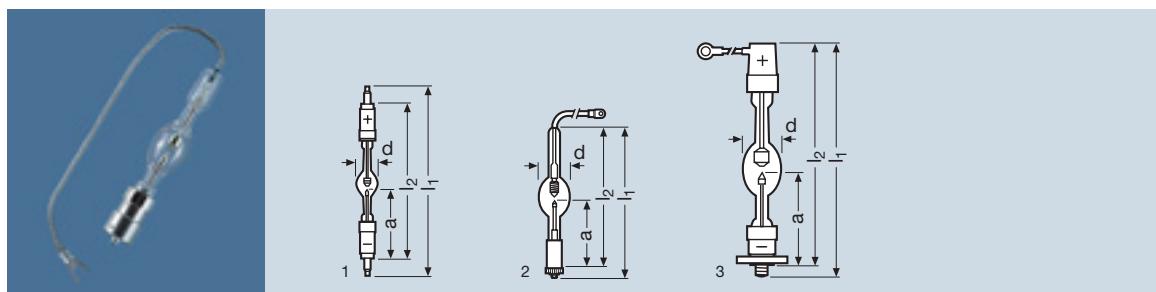

1) Distance from end of base to tip of electrode (cold)

2) For vertical burning position: anode (+) on top

3) Also available in ozone-free version with the same data: XBO 450 W OFR

4) Also available in Suprasil quartz version: XBO 250 W/4, XBO 450 W/4

LA = Lumen Advanced (High Efficiency lamp)

## Safety:

Because of their high luminance, UV radiation and internal pressure in both the hot and cold state, XBO® lamps may only be operated in enclosed lamp casings specially constructed for the purpose.

**Always use the protective jackets supplied when handling XBO® lamps. When handling the lamps without their protective jackets, always wear safety goggles, a face mask and gauntlets with wrist protectors.**

AC = Alternating current

DC = Direct current

HBO® are short arc lamps in which the discharge arc burns in an atmosphere of mercury vapour at high pressure.

Lamps rated at 350 W and above are used almost exclusively for the fabrication of electronic chips in microlithography.

Their main characteristics and advantages are as follows:

- High radiance
- Multi-line spectrum
- High radiant power in the UV and the visible range
- AC or DC operation

## Literature:

Further information can be found in the following brochure, obtainable on request from OSRAM:

- "Ready for your ideas!" Specialty lamps for innovative applications in medicine and industry

## Applications:

Lamps rated at less than 200 W are predominantly used in scientific and technical applications such as:

- Fluorescence microscopy
- Fluorescence endoscopy
- Light guide applications
- Schlieren photography
- Hologram projection
- UV curing

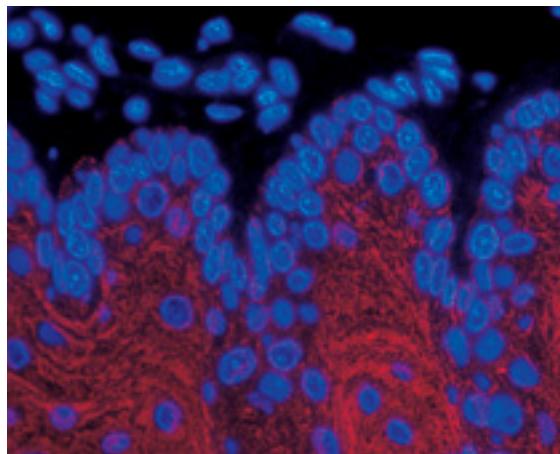

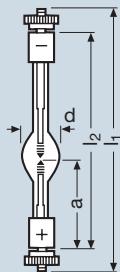

Photo: Zeiss, Fluorescence microscopy

1) Distance from end of base to tip of anode (cold)

2) The focus lies 45 mm in front of the mounting rim on the lamp axis (working distance)

## Disposal:

HBO® discharge lamps contain small quantities of materials (such as mercury) which are harmful to the environment. In Germany, they are classified as special waste (Code 35326 "Mercury, residue containing mercury, mercury vapour lamps, fluorescent lamps, fluorescent tubes"). In other countries the relevant national regulations must be followed.

## Literature:

For further information on HBO® lamps and notes for manufacturers of control gear, please refer to the following publications, available on request from OSRAM:

HXP® are short arc lamps in which the discharge arc burns in an atmosphere of mercury vapour at very high pressure. They use tungsten halogen cycle and are designed exclusively for AC operation.

Their main characteristics are as follows:

- High luminous efficacy
- Multi-line mercury spectrum superimposed on continuous spectrum
- Colour temperature of approx. 9500 K in the version VIS
- Elliptical reflector with interference coating for selective reflection
- Long life
- AC operation with rectangular current
- Approx. 95 mm long cables terminated with MATE-N-LOK<sup>7)</sup> plug

# Lamps without halogen, low voltage

	No.					

These low-voltage lamps are characterised by their exact filament geometry. The glass bulb has high optical quality.

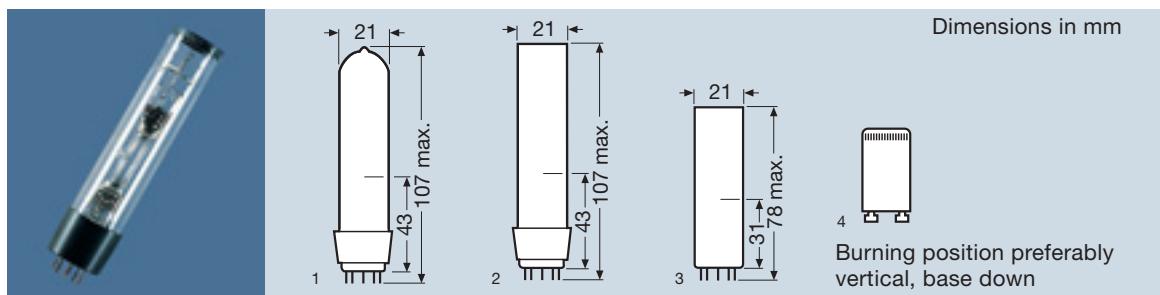

## Applications:

- As replacements in old luminaires used in technical and scientific applications
- As film projector lamps

**Caution:** Discontinued, do not use for new designs.

1) Flat-core filament, filament area perpendicular to the lamp axis

## Spectral lamps

AC = Alternating current DC = Direct current								

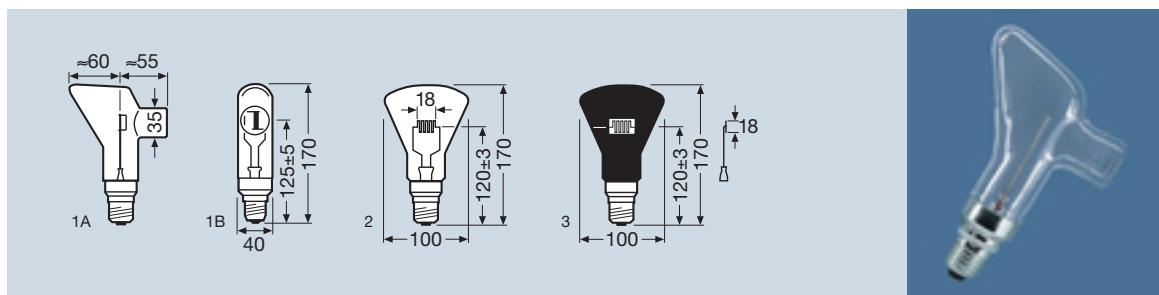

Spectral lamps are discharge lamps that emit the line spectrums of inert gases and metal vapours with high luminance or radiance. They are used wherever a line spectrum or monochromatic radiation is required.

### Applications:

Optics, radiation physics, spectroscopy, chemical engineering and medicine.

### Safety:

Because of the high-intensity light, the UV radiation and the high internal pressure during operation, spectral lamps may only be used in enclosed purpose-built housings. Suitable filters should be used to ensure that the UV radiation is reduced to an acceptable level.

## Lamps for scientific purposes

Lamps for scientific purposes are used mainly as comparison standards and calibration lamps for variables and measurements in photometry, colorimetry and radiation physics.

They are gas-filled incandescent lamps which are suitable for calibrating the following variables: luminous intensity, luminous flux, black body temperature, colour temperature and spectral radiance distribution.

## Parameters

Parameters for which test certificates can be provided are marked + in the following table. Test certificates can also be provided for parameters marked (+) but the lamps have not been specifically designed for that parameter.

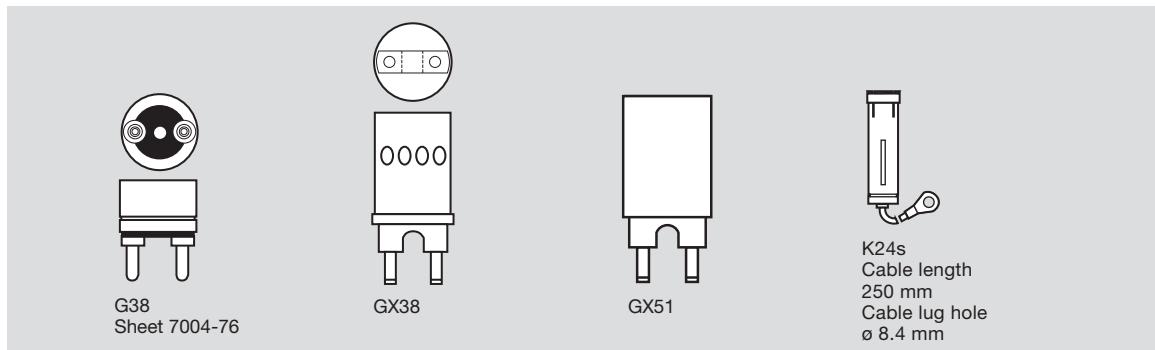

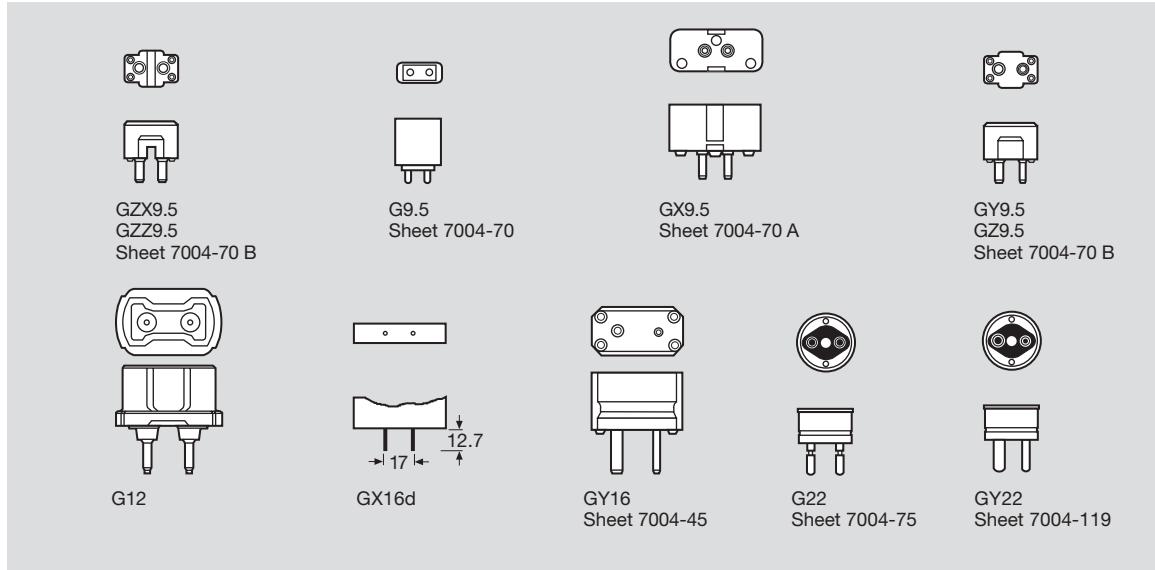

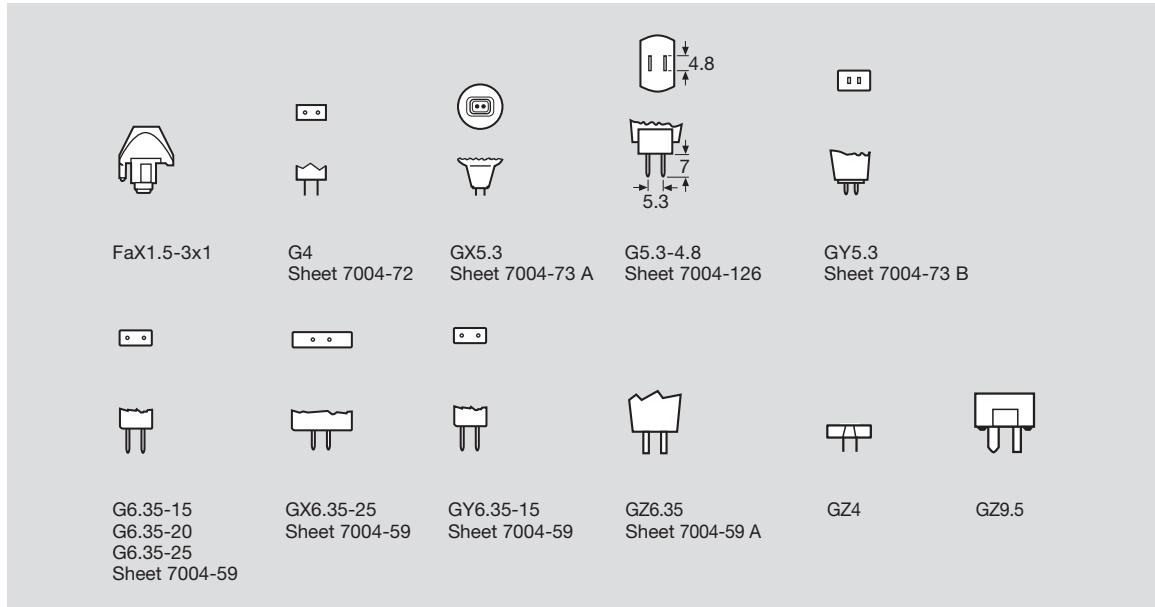

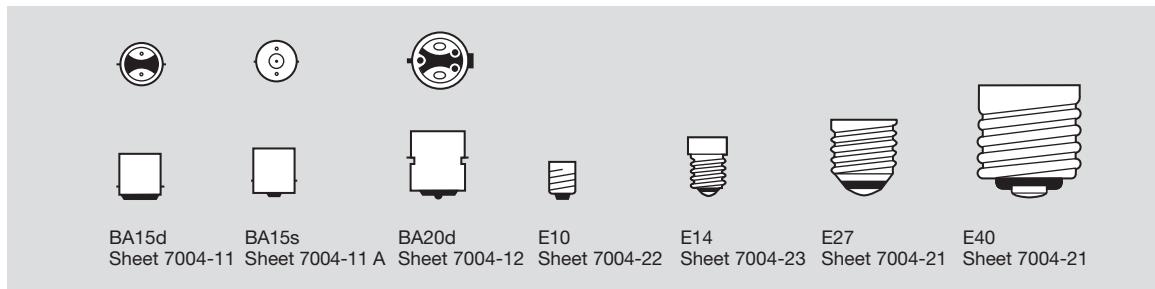

1) The colour temperature of 2856 K corresponds to light type A (DIN 5035)

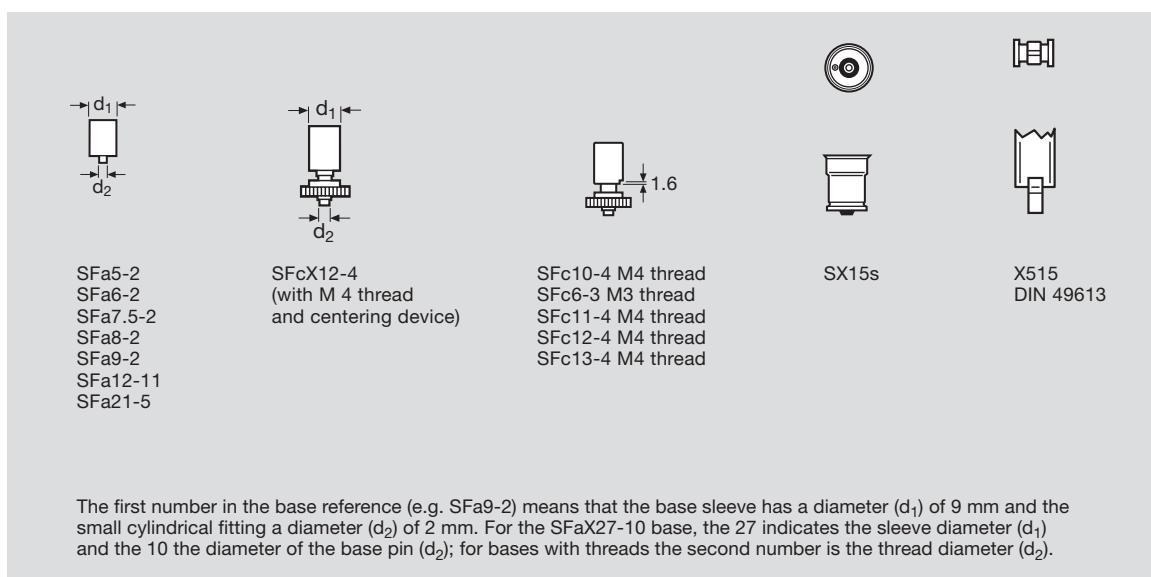

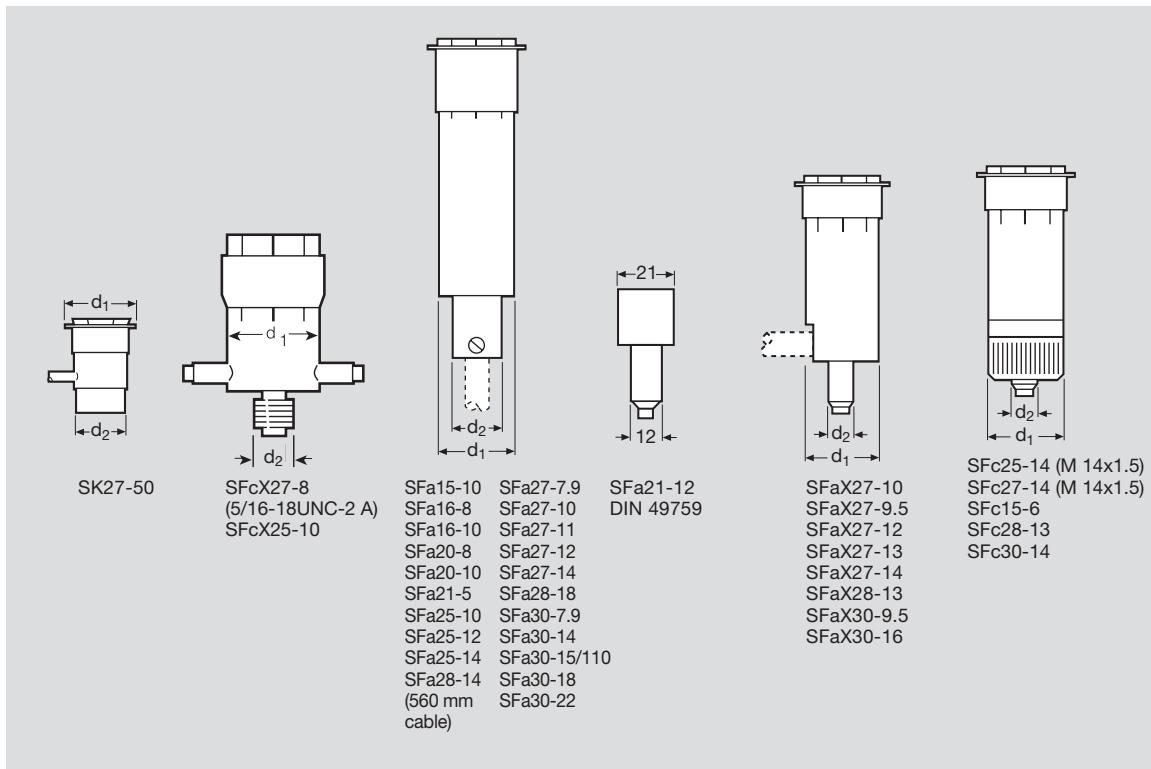

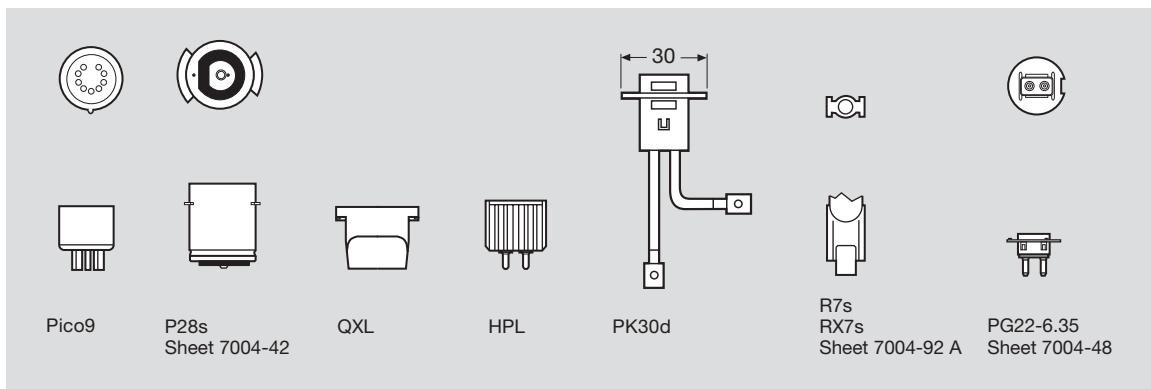

2) s = standing (base down); h = hanging (base up)

3) Only in addition to measuring the black temperature or the colour temperature

# Bases

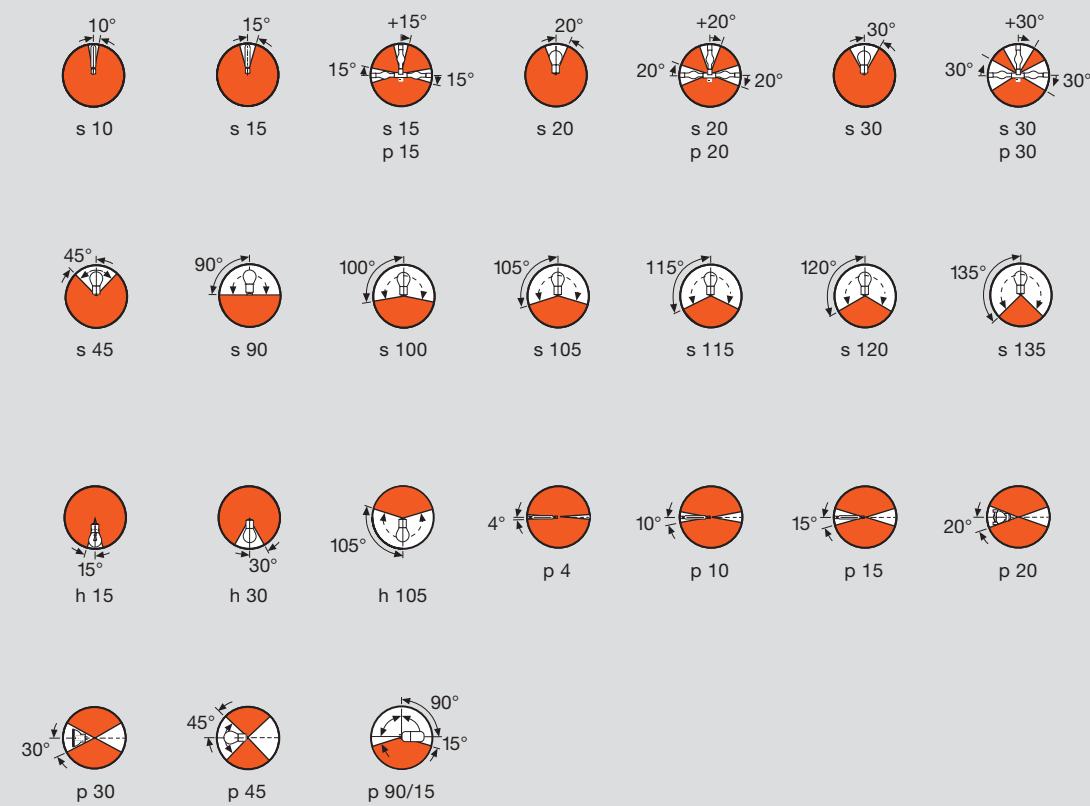

## IEC/EN 60061-1

## Burning positions

**Schematic diagram**

- Permitted
- Not permitted

Lamps with flat filaments may only be inclined perpendicular to the filament plane.

The lamps are guaranteed only if they are operated with approved control gear or with control gear declared to be suitable. A list of sources of control gear and igniters is available on request. With the exception of the XBO® product family, all discharge lamps contain small quantities of materials

which are harmful to the environment (such as mercury). In Europe, they therefore have to be disposed of under EEC Code 06 04 04\*, Waste containing mercury, or 20 01 21\*, Fluorescent tubes and other waste containing mercury. In other countries the relevant national regulations must be followed.

# Glossary of the most important lighting terms

As with any technical or scientific discipline, lighting technology has its own special terms and concepts for defining the characteristics of lamps and luminaires and for standardising the units of measurement.

The most important of these are described here.

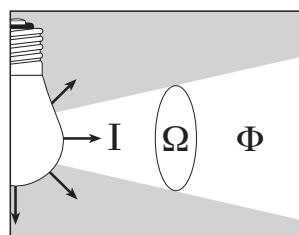

## Luminous flux $\Phi$

Unit of measurement: lumen [lm].

Luminous flux  $\Phi$  is all the radiated power emitted by a light source evaluated with the spectral sensitivity of the eye and the photometric radiation equivalent  $k_m$ .

## Light and radiation

Light is taken to mean the electromagnetic radiation that the human eye perceives as brightness, in other words that part of the spectrum that can be seen. This is the radiation between 360 and 830 nm, a tiny fraction of the known spectrum of electromagnetic radiation.

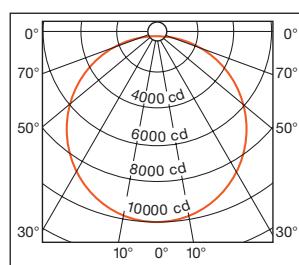

*Luminous intensity I is a measure of the luminous flux  $\Omega$  emitted in solid angle  $\Phi$ .*

## Luminous intensity I

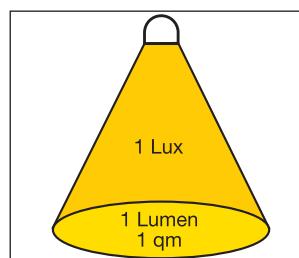

Unit of measurement: candela [cd].

Generally speaking, a light source emits its luminous flux  $\Phi$  in different directions and at different intensities.

Luminous intensity is the luminous flux radiated in a particular direction (solid angle  $\Omega$ ).

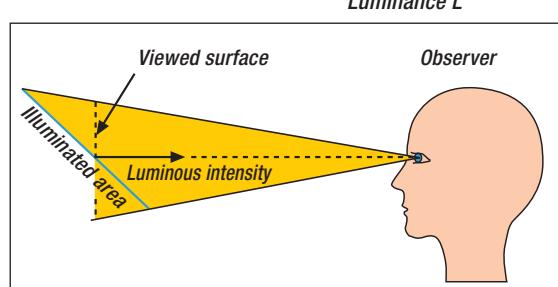

*Polar diagram*

*Illuminance E*

## Luminance L

Unit of measurement: candela per square meter [cd/m²]. The luminance L of a light source or an illuminated area is a measure of the impression of brightness.

*Luminance L*

### Glossary of the most photometric formulae:

Luminous intensity I [cd]	Luminous flux Solid angle $\Omega$ [sr]	Luminance L [cd/m²]	Luminous intensity [cd] Viewed luminous area [m²]
Illuminance E	Luminous flux falling on area [lm] Illuminated area [m²]	Luminous efficacy $\eta$ [lm/W]	Generated luminous flux [lm] Electrical power consumed [W]

## Luminous efficacy $\eta$

Unit of measurement: lumens per watt (lm/W).  
Luminous efficacy  $\eta$  indicates the efficiency with which the electrical power consumed is converted into light.

## Colour temperature

Unit of measurement: Kelvin [K].

The colour temperature of a light source is defined in comparison with a "black body radiator" and plotted on what is known as the "Planckian curve". The higher the temperature of this "black body radiator" the greater the blue component in the spectrum and the smaller the red component. An incandescent lamp with a warm white light, for example, has a colour temperature of 2700 K, whereas a daylight fluorescent lamp has a colour temperature of 6000 K.

## Light colour

The light colour of a lamp can be neatly defined in terms of colour temperature. There are three main categories here:

Warm White < 3300 K

Cool White 3300-5000 K

Daylight > 5000 K.

Despite having the same light colour, lamps may have very different colour rendering properties owing to the spectral composition of their light.

## Colour rendering

As a rule, artificial light should enable the human eye to perceive colours correctly, as it would in natural daylight. Obviously, this depends to some extent on the location and purpose for which light is required.

The criterion here is the colour rendering property of a light source. This is expressed as a "general colour rendering index" ( $R_a$ ).

The colour rendering index is a measure of the correspondence between the colour of an object (its "self-luminous colour") and its appearance under a reference light source. To determine the  $R_a$  values, eight test colours defined in accordance with DIN 6169 are illuminated with the reference light source and the light source under test. The smaller the discrepancy, the better the colour rendering property of the lamp being tested.

A light source with an  $R_a$  value of 100 displays all colours exactly as they appear under the reference light source. The lower the  $R_a$  value, the worse the colours are rendered.

## Luminaire efficiency

Luminaire efficiency (also known as light output ratio) is an important criterion in gauging the energy efficiency of a luminaire. This is the ratio between the luminous flux emitted by the luminaire and the luminous flux of the lamp (or lamps) installed in the luminaire.

For detailed information on indoor lighting with artificial light, see DIN 5035.

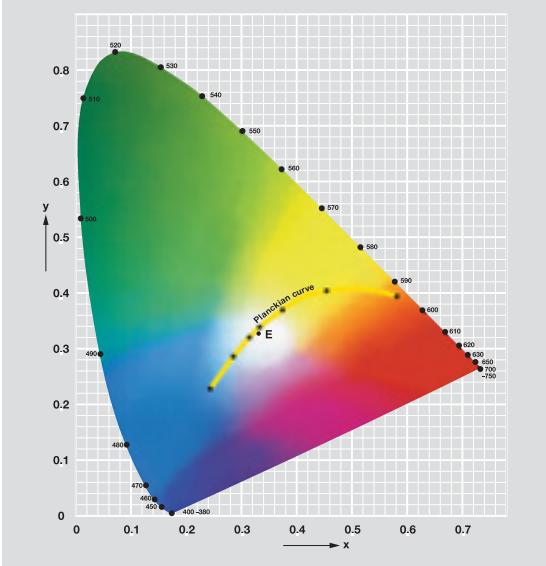

## Average life

The average life of a lamp is an average of the lives of individual lamps operated under standard conditions (50% failure = average rated life).

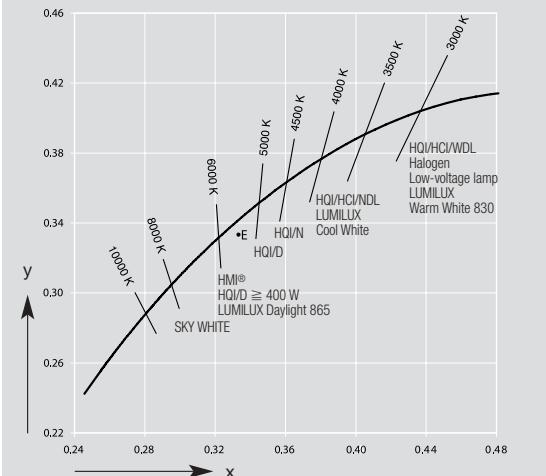

## Service life

Service life is a simple practical measure of the economical life of a lamp. It is the number of hours of operation after which the system luminous flux (i.e. the product of the relative luminous flux and the relative proportion of lamps still in operation) is around 80% of the initial value.

*Chromaticity diagram to DIN 5033*

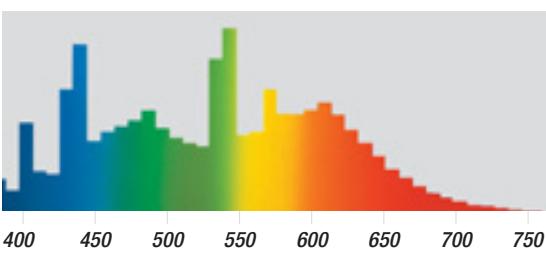

*Extract from the chromaticity diagram showing the Planckian curve*

*Wavelength  $\lambda$*

*Daylight spectrum of a BIOLUX® fluorescent lamp. The radiation is very evenly distributed over the entire visible range.*

## GENERAL INFORMATION

Sales and deliveries are subject to the OSRAM terms of supply and payment valid on the day the sales agreement is concluded.

Operational data and dimensions are subject to the usual slight tolerances.

OSRAM reserves the right to make technical modifications without notice.

All supplies are subject to availability.

® = Registered trademark

**Lamps are design rated wattage in accordance with ANSI standard 78.370-1982 (As Amended)**

The use of any ballasts other than those which have been approved or declared suitable will invalidate the warranty.

References for control gear and igniters are available on request.

Generally speaking, Display/Optic lamps may only be operated in casings that prevent exposure to UV light and prevent glass shards escaping.

With the exception of the XBO® product family, all discharge lamps contain small quantities of materials (such as mercury) which are harmful to the environment. In Europe they must therefore be disposed of appropriately under EEC Code 06 04 04\* (Waste containing mercury) or 20 01 21\* (Fluorescent tubes and other waste containing mercury). In other countries, relevant national regulations must be observed.

## CE LABELLING FOR LUMINAIRES, LAMPS AND ACCESSORIES

Since January 1st 1996, products that fall under the scope of the EC guidelines for electromagnetic compatibility (EMC Guidelines) must carry the CE label. The CE label indicates compliance with the principal requirements of these guidelines. From January 1st 1997, the same will apply to products that come under the low voltage guidelines. Of course, all our products meet the requirements of the relevant EC guidelines and therefore carry the CE label.

Notes on CE labelling:

1. CE labelling as a requirement for marketing products

From January 1st 1996, manufacturers and importers are obliged and are responsible for marking products subject to the EMC regulations with the CE label either directly on the product or on its packaging or on accompanying documentation. The CE label is a requirement for sales within the EU and must therefore be applied before a product can be marketed. By applying the CE label to their products, manufacturers and importers are

confirming that their products comply with the "basic requirements" of special European guidelines and that they meet the stated objectives of the guidelines (electromagnetic compatibility, for example).

As a rule, these "basic requirements" are met if the products were manufactured in compliance with the relevant harmonised European standards.

2. The CE label is an administrative mark

The CE label is an administrative mark addressed to the national inspection

agencies. The CE label indicates to these agencies that the labelled product complies with European law at the time of its marketing.

3. Neither retailers nor consumers have the right to inspect the conformity certificates of the manufacturers

The right to request and inspect conformity certificates is reserved exclusively for those market inspection agencies responsible for checking that electrical/electronic products comply with statutory safety requirements.

4. The CE label is not a seal of quality or an approval mark

CE labelling relates solely to compliance with the statutory "basic requirements" contained in certain guidelines. In no way therefore is it an indicator of the quality of the product. As an administrative label required by law and of no value to consumers or users, the CE label should not be confused with the approval marks (such as ENEC and BEAB marks) issued by independent inspectorates. These inspectorates do not even check whether or not a product carries the CE label legitimately.

# Disposing of your lamps and luminaires:

The new EU directive relates, among other things, to luminaires (with the exception of luminaires in households), fluorescent lamps, compact fluorescent lamps, discharge lamps including high-pressure sodium lamps, metal halide lamps and low-pressure sodium lamps. Starters, control gear and light emitting diodes are classed as luminaire components and as such are part of the luminaire disposal process.

All OSRAM products that need to be disposed of under the WEEE directive are labelled with the symbol shown here.

All manufacturers must register with their relevant national authority. Products from non-registered manufacturers may no longer be marketed after November 24, 2005.

In Germany, OSRAM is registered as a manufacturer in the "Elektro-Altgeräte-Register" [Old Electrical Equipment Register] (EAR) as number **DE 71568000**.

In addition, there are individual regulations governing the disposal of lamps and luminaires in the member states of the EU and also in Norway and Switzerland. For more information please contact the local OSRAM company.

Together with the European lamp manufacturers in the European Lamp Companies Federation (ELC), OSRAM has developed a model for disposing of lamps cleanly and efficiently.

The primary objectives are to reduce the load on the environment, safeguard valuable resources and protect the environment and public health.

All consumers (commercial and domestic) are obliged to return old lamps for separate disposal. Collection points have been set up for this. Consumers do not have to sort the old lamps by manufacturer or by product age. Lamps from private households and businesses can be disposed of at local recycling centres. Large quantities of lamps can be disposed of via the Lightcycle scheme.

Incandescent lamps and tungsten-halogen lamps do not contain any substances that are harmful to the environment and can be thrown away with household waste.

Discharge lamps are fragile and contain special substances so they have to be disposed of carefully. The lamps are therefore collected separately – tubular fluorescent lamps in rung-type pallets, all other lamps in grid boxes.

On behalf of lamp manufacturers, Lightcycle organises the logistics processes for disposing of the lamps cost-effectively and with minimal impact on the environment, both directly and at local recycling centres. Lightcycle bundles the volume to be transported and coordinates the collection logistics. You drop off the old lamps and Lightcycle does the rest.

Disposal of luminaires from commercial applications is handled by Interseroh. OSRAM is a contract partner of Interseroh. From March 23, 2006 luminaires can be disposed of directly throughout Germany at any one of 100 Interseroh collection points. In addition to dropping off luminaires at collection points, luminaires can also be collected from wholesalers, installers, building sites or customers within a reasonable period. There are basically no volume restrictions on collection jobs. For luminaire volumes in excess of 15 m<sup>3</sup> Interseroh can provide an individual container as a permanent collection point. You drop off the luminaires and Interseroh does the rest.

## RoHS Directive:

### Greatly reduced mercury content

As of July 1, 2006, this EU Directive will prohibit the use of certain hazardous substances. The mercury content in some discharge lamps will be restricted. As a company committed to the protection of the environment, OSRAM is doing more than just meeting statutory requirements. Our objective is to reduce hazardous substances such as mercury to the absolute minimum needed and to promote the development, for example, of efficient mercury-free lighting systems. Because it promotes the use of new environmentally friendly technologies and materials we see the RoHS Directive (**R**estriction of **H**azardous **S**ubstances) as an exciting challenge with long-term benefits for health and the environment.

1) From 23.03.2006 there will be an obligation in Germany to take products back
